INCYTE

1801 AUGUSTINE CUT-OFF

WILMINGTON, DE 19803

Job Position Inquiry

To whom it may concern,

About Me

I am a physical chemist by training with a background in scientific computing, specializing on biological systems. Specifically, I have integrated principles from chemistry, physics, and statistics to investigate diverse phenomena within bacterial cells, such as a regulatory mechanisms for stress response and the interplay between the transcriptome and proteome. In my career, I have achieved proficiency in a wide array of computational tools to design and implement analytical pipelines within multiple different environments (HPC, AWS, Docker, Conda) on various operating systems (Linux, MacOS, Windows) leveraging both custom and pre-built software packages with standard coding languages (Python, R, Bash, etc). Additionally, I have developed skills in designing, managing, and contributing to exploratory multi-year projects that require flexibility, self-assessment, reproducibility, and publication-level documentation. I have extensive experience working in highly collaborative environments, both domestically and internationally, and I am well practiced in presenting technical material to audiences of varying subject-matter expertise.

Why Incyte?

My former experience has given me a deep appreciation for scientific innovation and the need for more efficient and accelerated methods to extend innovation beyond the laboratory and into the real world. Therefore, I am particularly drawn to Incyte's mission to the rigorous pursuit of research and development excellence to improve the lives of patients, make a difference in health care, and build sustainable value. I am inspired by Incyte's commitment as a leader in biopharmaceuticals to use patient-relevant data and disease models to uncover novel insights and targets for unmet medical needs, regardless of the disease or size of the patient population. I am excited at the opportunity to join the Incyte team and contribute to its vision with my computational skills.

Why Me?

As a computational chemist and biophysicist I would bring a deep understanding of biological research complemented by hands-on experience in scientific computing across diverse operating systems and environments. I have significant knowledge of Python and am proficient in R as tools to solve complex scientific questions including using software such as JupyterNotebook for interactive data visualization. Throughout my career I have worked with many data sets of varying type and size, and I am confident in my capacity to adapt, manage, and utilize new data sets regardless of size for addressing challenging biological questions. This includes preparing data sets for integration within various software and algorithms capable of predictive analytics and complex data relationships. While my AI/ML experience is currently foundational, I have experience with AI/ML approaches such as ChatGPT and AlphaFold, and I am very eager to learn more and employ them towards real world applications. My ability to achieve and communicate scientific discovery is exemplified through my publication and presentation record. In summary, I believe my problem-solving abilities, commitment to learning and integrating novel techniques across disciplines, and aptitude for collaboration makes me an ideal candidate for a position at Incyte.

Thank you for considering my application. I would welcome the opportunity to discuss my qualifications further.

Sincerely,

Troy A. Brier, PhD

PROFESSIONAL SUMMARY

Chemist and software developer with a background in biological scientific computing. Experienced solving diverse problems in computational science settings applying novel techniques across domains. Skilled in the design and management of exploratory multi-year projects requiring flexibility, self-assessment mechanisms, and documentation suitable for publication. Proficient in presenting technical material to audiences with varying subject-matter expertise.

TECHNICAL SKILLS

Programming : PYTHON, MATLAB, BASH, R, TCL, \LaTeX , C/C++, CUDA, HTML

Tools : Unix/Linux, MacOS, Windows, AWS, SVN, Git, SSH, Docker, Apptainer, slurm, Jupyter, VScode, MARTINI CG, NVIDIA DGX

Software : pandas, matplotlib, seaborn, numpy, scipy, biopython, cobra, HTSeq, pysam, Guppy, minimap2, PyTorch, sklearn, HDF5, VMD, MAFFT, Clustal, BLAST, deepTools, SAMtools, GROMACS, AMBERMD, NAMD, AlphaFold2

Theoretical Training : *Mathematics* — Probability Theory, Stochastic Processes, Information Theory, Numerical Analysis, Linear Algebra, ODEs | *Science & Engineering* — Biophysics, Systems Biology, Bioinformatics, Molecular Dynamics, Equil. and Nonequil. Statistical Physics and Thermodynamics, Quantum Mechanics, Chemical Kinetics

SELECTED EXPERIENCES

Graduate/Postdoctoral Research Assistant | *Luthey-Schulten Group*, Dept. of Chemistry at UIUC *January 2018 – December 2024*

- Constructed a stochastic kinetic model using data collected from super-resolution imaging experiments to simulate the sugar-stress response in *Escherichia coli*.
- Collaborated in the use of GPU-accelerated, hybrid stochastic-deterministic methods to simulate whole-cell models of bacteria that capture the reaction and diffusion of $\sim 10,000$ biochemical components at the cell-scale.
 - * Constructed a kinetic model of the nucleotide metabolism for a bacteria cell.
 - * Curated genomics, transcriptomics, proteomics, metabolomics, and kinetic rates data.
 - * Updated software/code for use on high performance GPU cluster.
- Developed a methodology to profile the bacterial transcriptome coupling bioinformatics and computational analysis of NGS experiments.
 - * Built a sequence alignment based pipeline to identify genetic motifs and predict transcriptional events in bacteria
 - * Analyzed Illumina, Pacific Biosciences, and Oxford Nanopore Technologies RNA sequencing experiments.
 - * Created tools to predict transcription units and visualize the RNA isoforms.
- Assisted PI in preparation of grant materials to acquire federal funding: *NSF MCB 2221237* - \$2.00M (proposal, annual reports) | *NSF MCB 1818344* - \$1.50M (annual reports) | *NSF MCB 1840320* - \$1.18M (annual reports).
- Maintained group's GPU cluster and website.
- Collaborated with industrial and academic partners, both domestic and international.
- Presented research results to broader scientific community at domestic and international conferences.
- Mentored junior graduate and undergraduate student researchers.

Seminar/Workshop Teaching Assistant | *Luthey-Schulten Group*, Dept. of Chemistry at UIUC *May 2024, October 2021, July 2019*

- NSF STC-QCB Advanced Computational Workshop 2024—Mentored junior graduate students to construct teaching material, installed software on supercomputer, and troubleshoot errors during live tutorials.
- Online Hands-on Workshop on Computational Biophysics—Held virtual lecture for graduate students and post-doctoral and prepared tutorials run on AWS instances.
- Center for the Physics of Living Cells (CPLC) Summer School—Held lectures for graduate students and post-doctoral associates and prepared tutorials run on AWS instances.

Undergraduate Research Assistant | *The Baker Group*, Dept. of Chemistry at TCNJ

December 2014 – May 2017

- Explored atomistic and coarse grained molecular dynamics simulations of membrane bound proteins
- Presented research results to broader scientific community at domestic conferences.
- Mentored junior undergraduate student researchers.

EDUCATION

University of Illinois at Urbana-Champaign (UIUC)

PhD in Chemistry

August 2017 – December 2024

The College of New Jersey (TCNJ)

BS in Chemistry (ACS-certified)

August 2013 – May 2017
